

# **Earth Rotation and Earth Orientation**

Axel Nothnagel

Institute of Geodesy and Geoinformation, University of Bonn, Germany

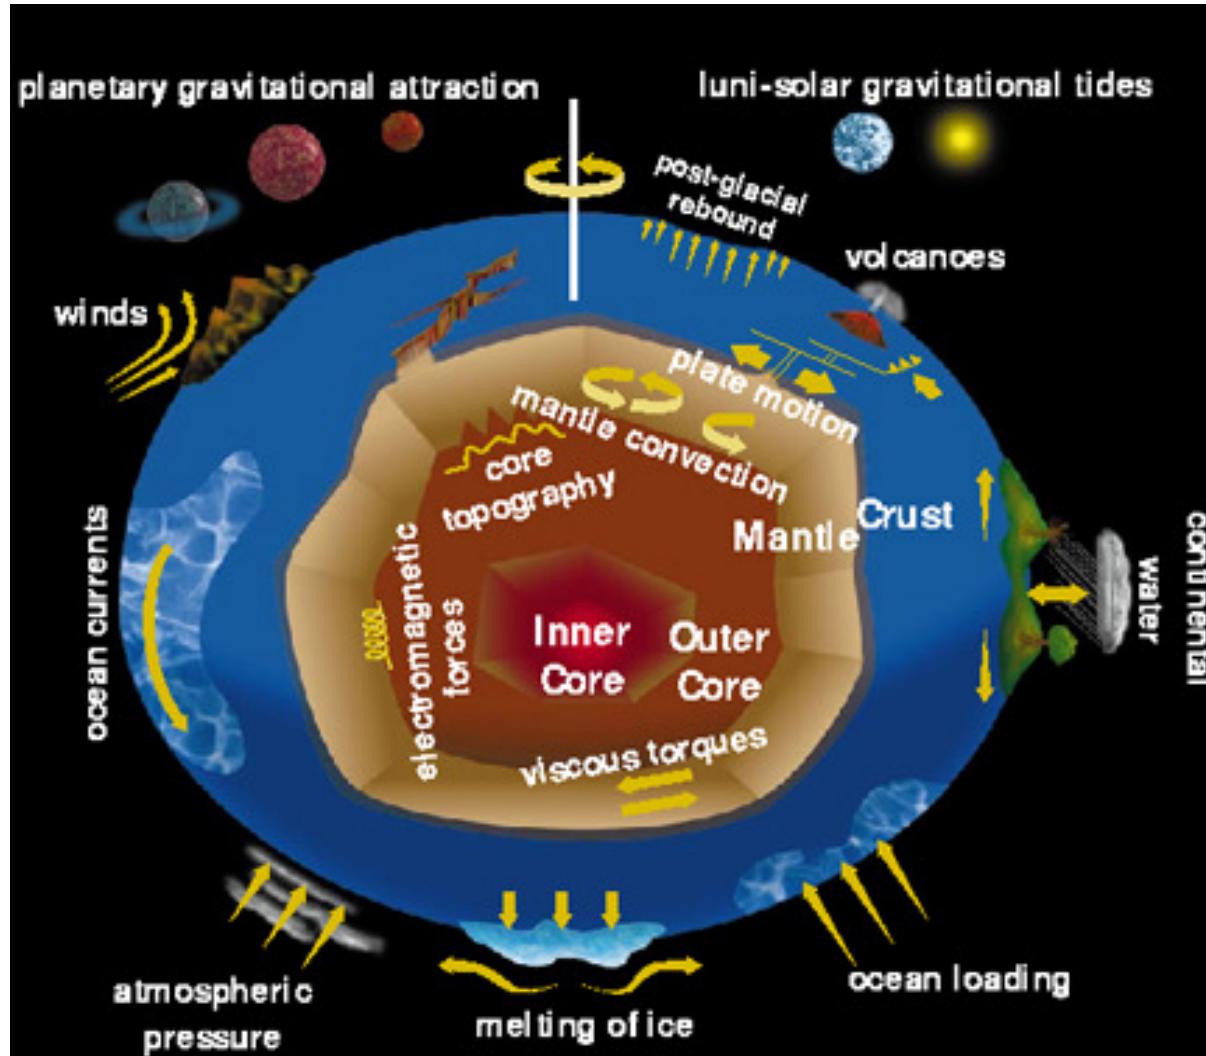

- Concept of Lecture
- Dynamical causes of Earth orientation variations
- Kinematic manifestations of Earth orientation variations
- VLBI observations of Earth orientation variations
- VLBI contributions to the International Earth Rotation and Reference Systems Service (IERS)

# Concepts of Earth Rotation

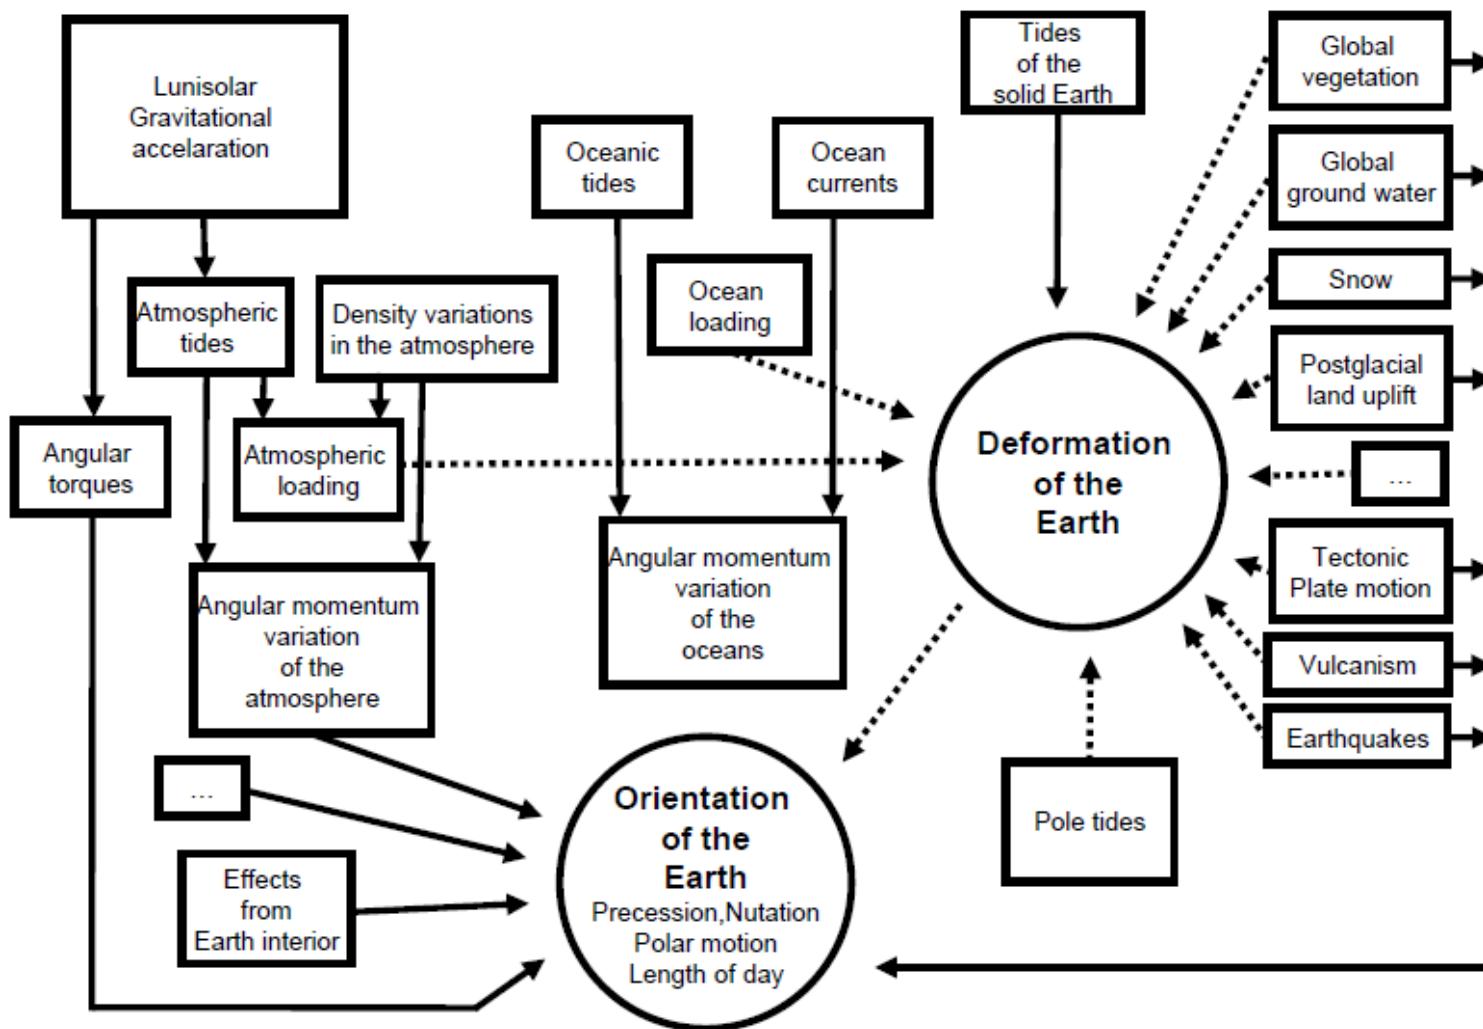

Earth rotation is an apparently regular motion. However, with increasing precision of the observations, Earth rotation appears more and more irregular. We are interested (only) in the irregular behaviour.

- Dynamics
  - Driving mechanisms
  - Correlations/Dependencies
- Kinematics
  - Earth fixed system in space fixed system
  - Earth rotation axis
- VLBI observations
  - Sensitivity of baselines
  - Results
